Agricultural Statistics 2001

Foreword

Agricultural Statistics 2001 is the 26th statistical handbook published by Saskatchewan Agriculture, Food and Rural Revitalization.

The handbook includes statistics on agricultural finance, crops, livestock and other related information. Updated and historical information for many of the tables contained in the handbook is available at the Saskatchewan Agriculture, Food and Rural Revitalization Web site.

The handbook is useful to agriculture decision-makers: producers, agribusinesses and governments. Suggestions for changes and improvements are welcome. For comments or enquiries please contact:

Crop Districts and Soil Zones

IX

The above map shows an outline map of southern Saskatchewan indicating the crop districts and soil zones. Much of the crop and livestock production data in the handbook is presented by crop district. The soil zone demarcation shows the variation in growing conditions in Saskatchewan.

As most of Saskatchewan's soil is predominantly of loamy texture, production capabilities are determined largely by weather conditions and the presence of organic matter. The brown soil zone covers approximately 22 million acres in southwest Saskatchewan. The relatively warm temperatures, lack of moisture and lack of organic matter in this region limit crops to small grains and the use of grassland for livestock production.

The dark brown soil zone, covering 18 million acres, lies north and east of the brown soil zone. A small area, with the characteristic of cooler temperatures and more moisture, is also evident around the Cypress Hills in southwest Saskatchewan.

The black soil zone covers nearly 26.5 million acres in the north and east of the agricultural area. The growing period is shorter but the lower temperatures and increased moisture allow for a wider variety of cropping practices.

Table 5-3 Rural Area Definition

Rural Area: Rural areas are lands lying outside urban areas. Censuses: 2001, 1996, 1991, 1986, 1981, 1976, 1971, 1966, 1961

Special Notes, Data Quality and Applications

Within the rural areas of Canada, population densities and living conditions can vary greatly.

Included in rural areas are:

- small towns, villages and other populated places with less than 1,000 population according to the previous census;
- rural fringes of census metropolitan areas and census agglomerations that may contain estate lots, agricultural, undeveloped and non-developable lands;
- remote and wilderness areas;
- agricultural lands
